Allowable Subject Matter

Claims 1-24 are allowed. A statement of reasons for allowance follows. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art of record does not teach or suggest an optical rearrangement device which meets all the limitations of claim 1, or a method of ruggedizing an optical rearrangement device which meets all the limitations of claim 16. US 4927227 is considered to be the most pertinent cited reference. It discloses an apparatus including input and output light guide arrays and a light guide repositioning section (fig. 8), a tube 23 (fig. 1A), and an adapter (fig. 3) including a point 91 to which strength elements may be attached. This apparatus differs from claim 1 in that the tube has a closed end 27, and thus cannot be reasonably interpreted as being "positioned between the input and output sides". Furthermore, there is only one adapter at one end of the tube, not an adapter at each respective end of the tube. With regard to both claims 1 and 16, it is noted that the tube 23 is not described as flexible and there is no suggestion or motivation to make the tube flexible. It is also noted that the '227 apparatus is a closure for splices. Thus there is no continuity in the light guides to the extent that first and second input light guide arrays can be repositioned to form first and second output light guide arrays. Accordingly, claims 1 and 16 are not anticipated or made obvious by US 4927227 or any of the other references of record. Claims 2-8 and 17-24 depend from claims 1 and 16 respectively.
